BI SmartLINK™

Seven independent modules controlled within our proprietary BI TotalAccess® software:

- **Check-In:** Biometrically verifies client identity and location through fixed or randomly scheduled check-ins. Allows officers to confirm location, curfew, and travel restriction compliance. Facial biometric and voice biometric options available.

- **Self Report:** Similar to a reporting kiosk, captures client responses to a series of questions, logged for officer review and follow up.

- **Community Resources:** Provides clients with a list of agency-approved service providers for housing, medical, employment, and other essential services, and access to a dedicated call center.

- **Calendar:** Pushes officer-created calendar events and reminders to the client. The officer can also require a biometric check-in that correlates with a mandated activity to verify that the client attended certain activities.

- **Messages:** Permits clients and officers to directly message each other. All messages dated, time stamped, and stored.

- **Documents:** Allows clients to upload and submit documents captured as photographs to TotalAccess, where a supervising officer can review.

- **Supervision Terms:** Enables clients to retrieve and review conditions of supervision at any time.
